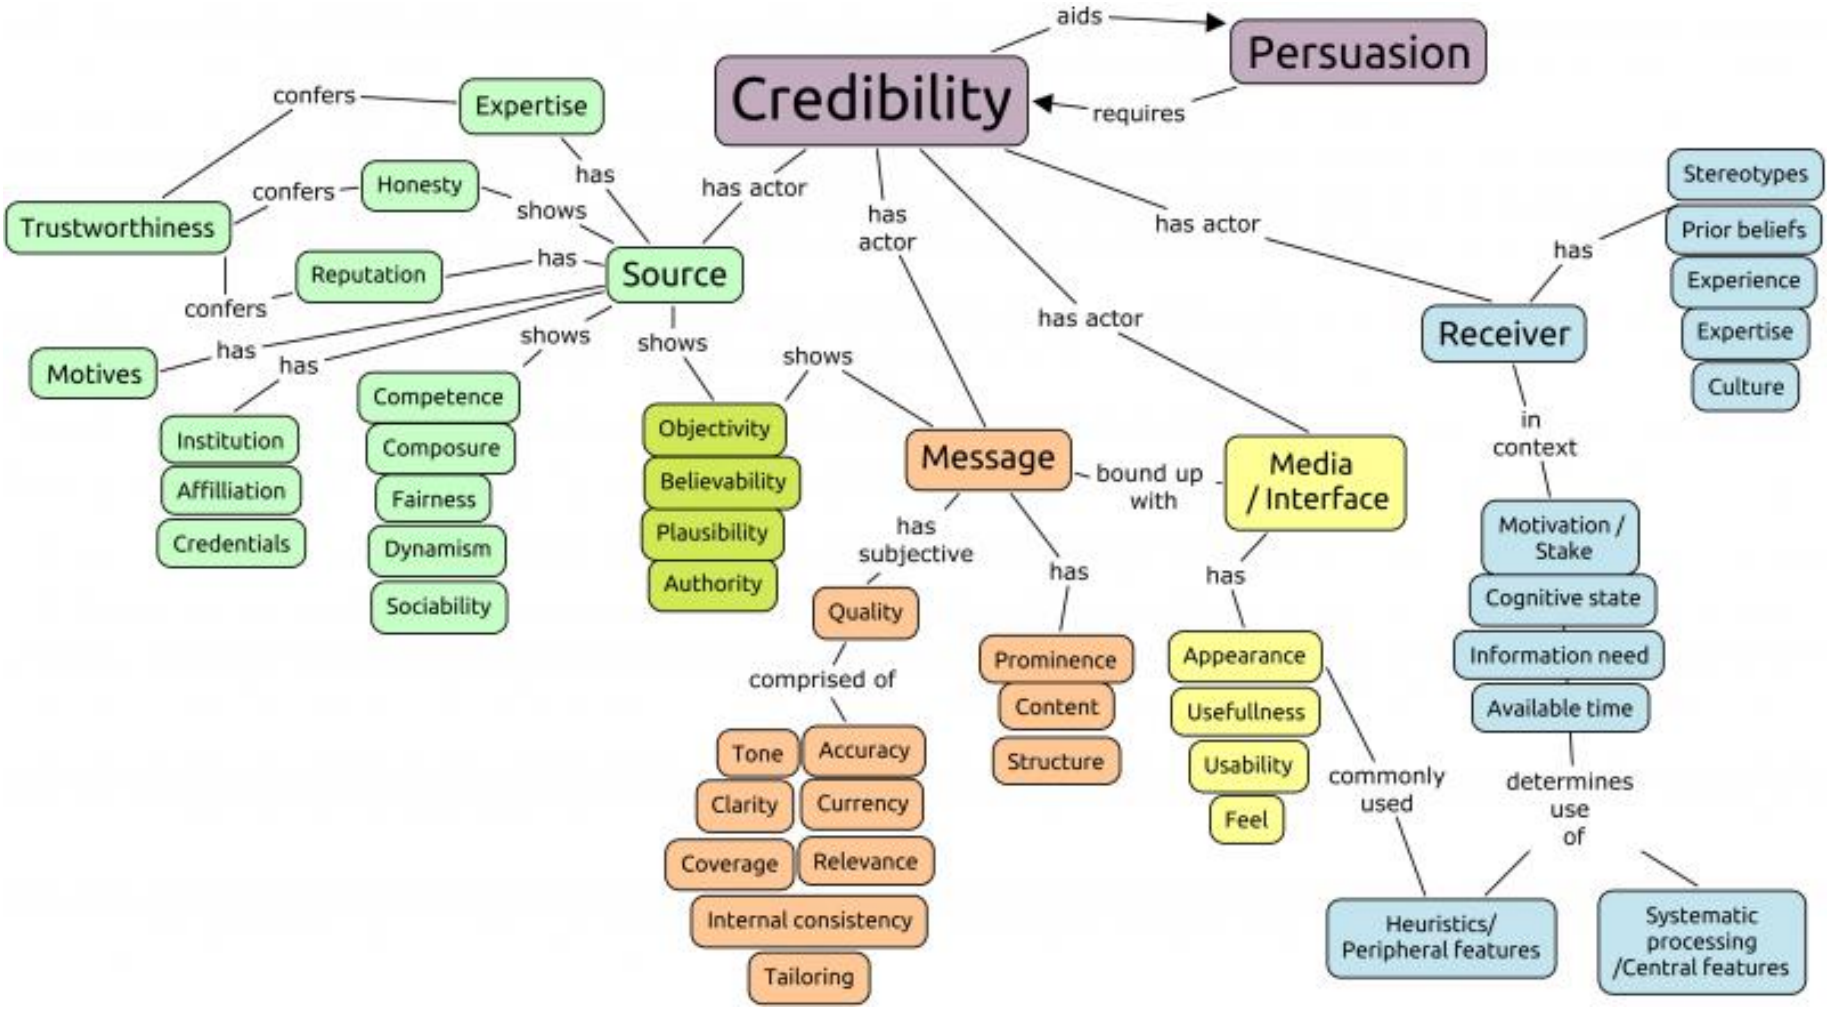
NEGOTIATION AND CONFLICT MANAGEMENT

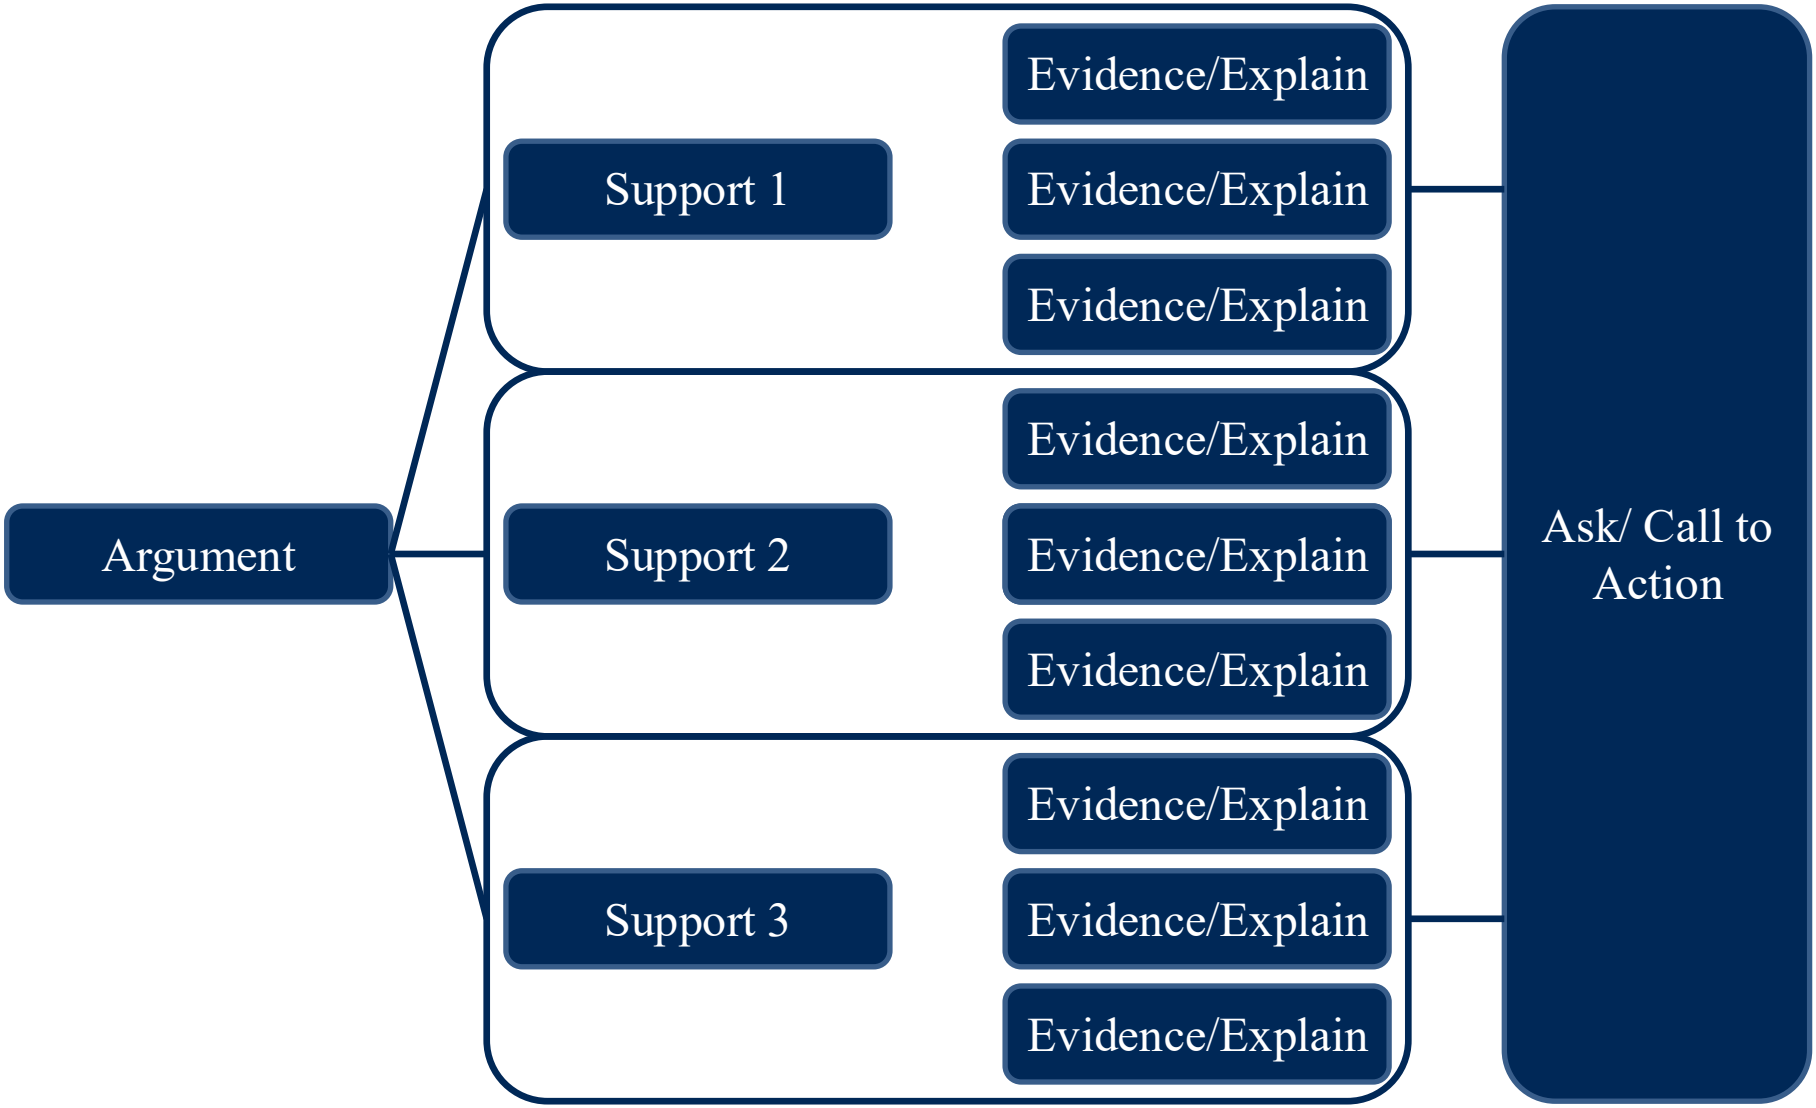
Persuasion Intro

Persuasion Map



Matthews, P. (2013)

Basic Persuasion Map



Components of a Persuasive Message

- There are several interrelated components to persuasive messages
  - Gain attention (argument)
  - Raise a need (argument)
  - Deliver a solution (argument)
  - Provide a rationale (support)
  - Validate the views, preferences, and concerns of others (support)
  - Give counterpoints (optional) (support)
  - Call to action (conclusion/call to action)

- The key is knowing how to communicate each of these components to the specific audience
  - Analyzing your **audience**
  - Gathering the right **information**
  - Developing a **message**

Introduction to Persuasion Tactics

- Two primary ways people are persuaded
  - Rational and logic-based tactics (central route)
    - Direct and information based
  - Psychological and emotion-based power (peripheral route)
    - Auto-response based
  - These often interact

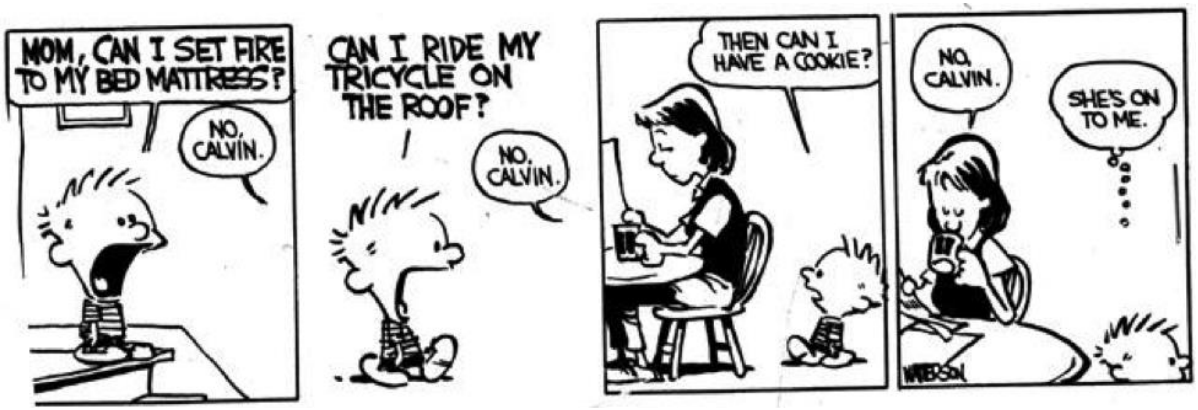
Rational and Logic-Based Tactics

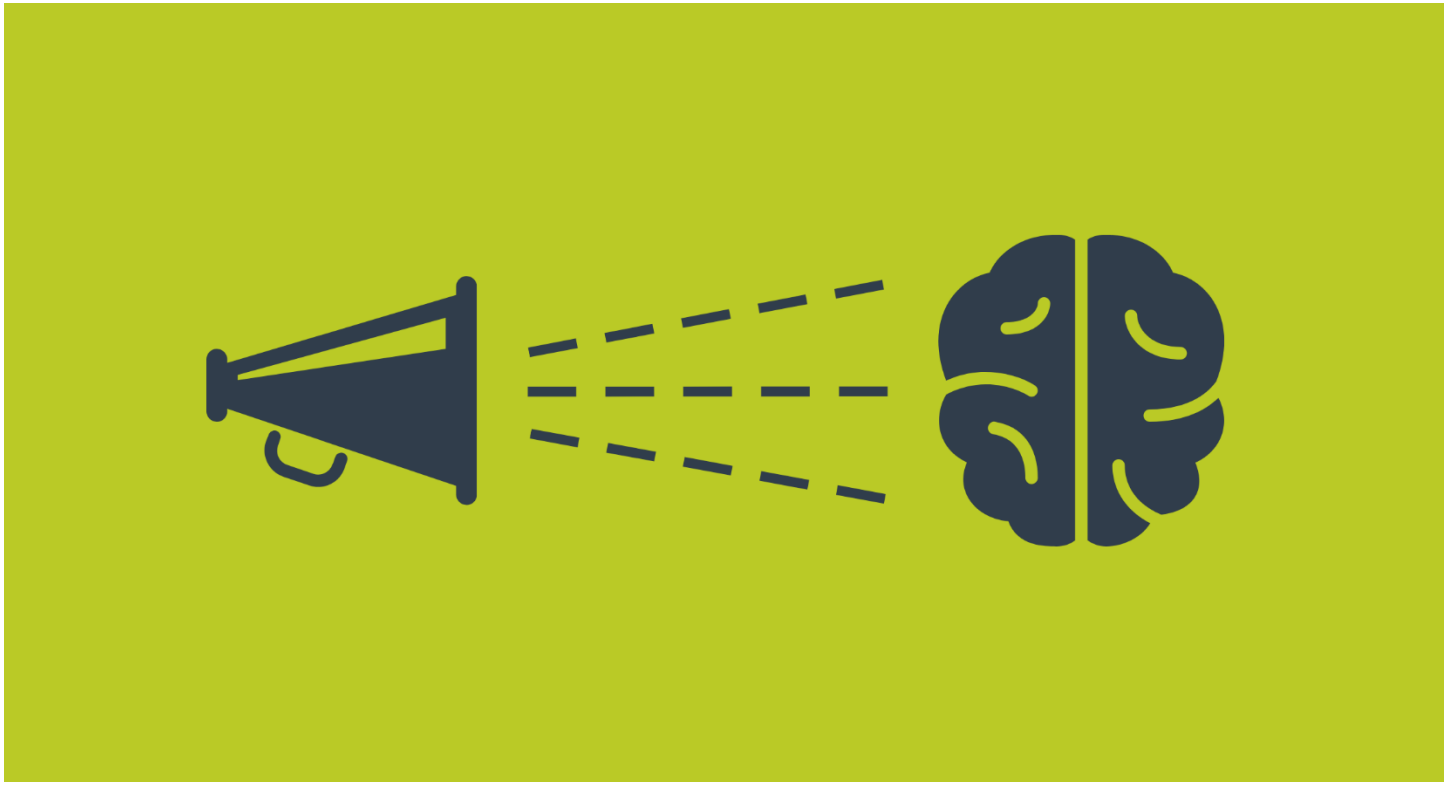
- **Agenda**
  - Issues/topics are often initially addressed one at a time
  - One party usually introduces each new issue to be discussed
  - If you can gain control of the order in which issues are discussed, you can introduce them in an order that benefits you
  - Try to prevent the other party from taking complete control
    - Offer to take turns introducing issues

- **Use contrast**
  - Introduce several unattractive options prior to a final (relatively) attractive option that benefits you
  - The other party may believe the (relatively) attractive deal is the best they can do after seeing all of the previous options

Psychological and Emotion-Based Tactic

- **Consistency (foot in the door)**
  - People like to maintain consistency in their actions and beliefs
  - By getting the other party to like you and agree to a small request, you can create a psychological commitment
  - Small and easy agreements can lead to a larger agreement due to the desire to remain consistent





Six Principles of Persuasion
